

Connect your Makachain network to MetaMask

Step by Step setup

Connect your Makachain network to MetaMask

This guide provides step-by-step instructions on how to connect the Makachain network to your MetaMask wallet. Once connected, you'll be able to access and interact with the Makachain network directly from your wallet.

Before starting you will need
[Metamask.io](https://metamask.io)

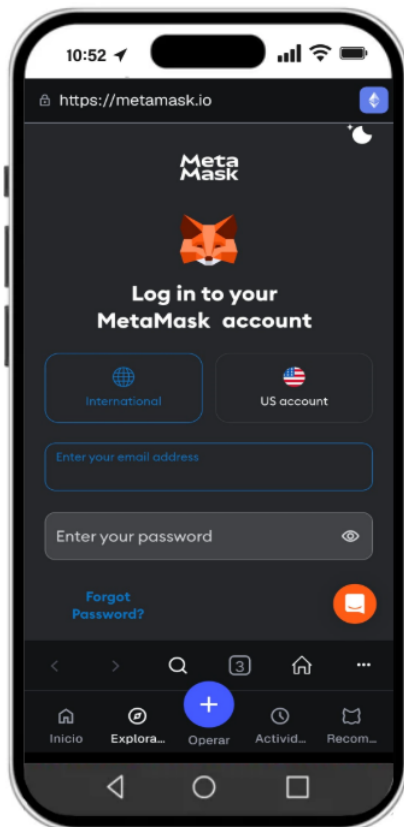

You can check the video tutorial here: <https://youtu.be/DQjMBKc1-8c>

makachain.io

Connect Makachain to your Metamask wallet

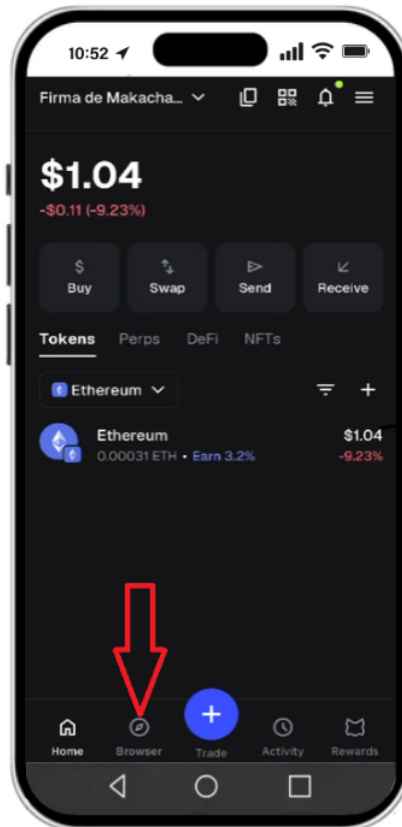

1

Log in to your MetaMask account, with your credentials

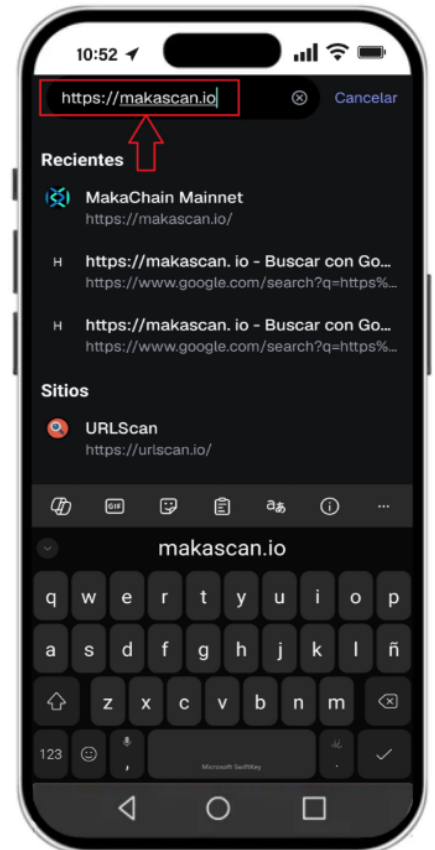

2

After logging in, click the Browser button,

3

In the URL bar, type <https://makascan.io> and press Enter.

makachain.io

4

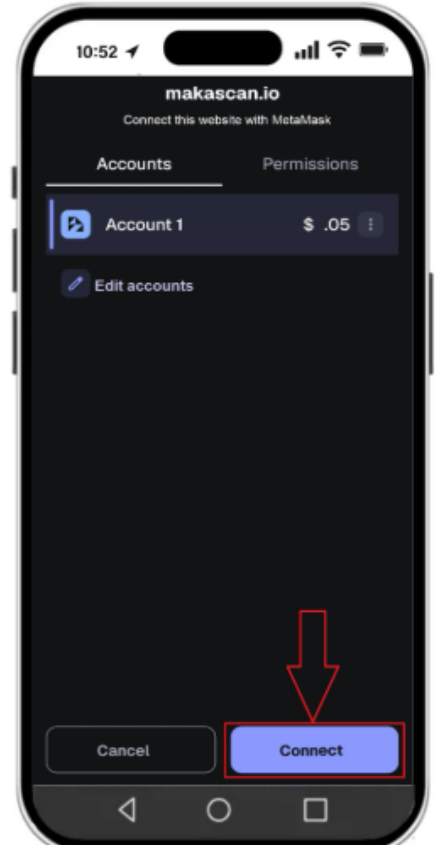

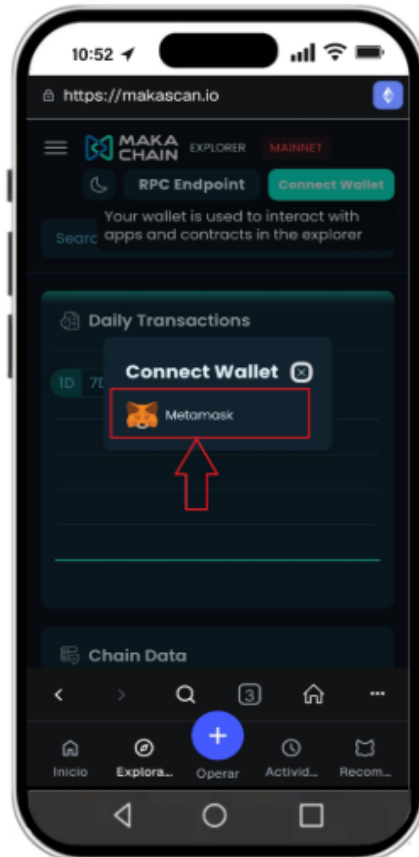

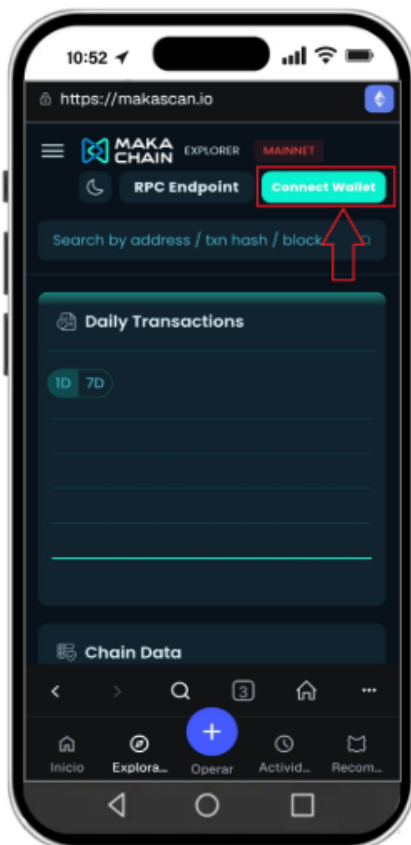

You will be redirected to the Makachain Explorer. Once there, click on the Connect Wallet button.

5

A Connect Wallet prompt will appear. When it does, click MetaMask.

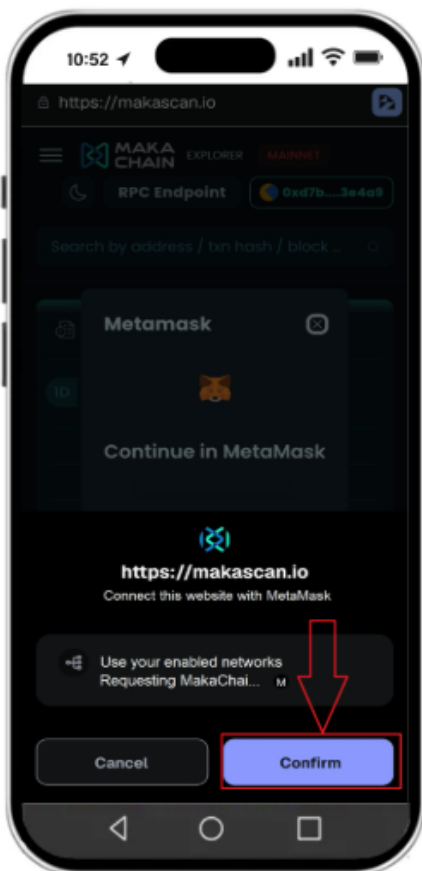

6

Click the Connect button.

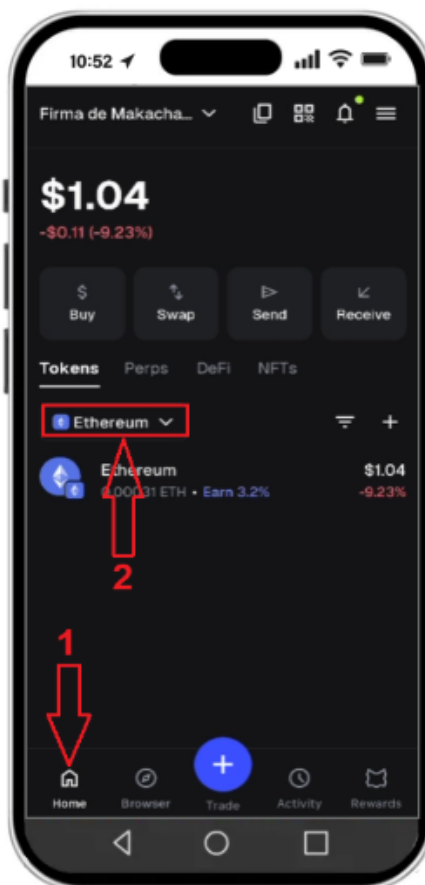

7

A confirmation message will appear. Click Confirm to continue. And the wallet will be added

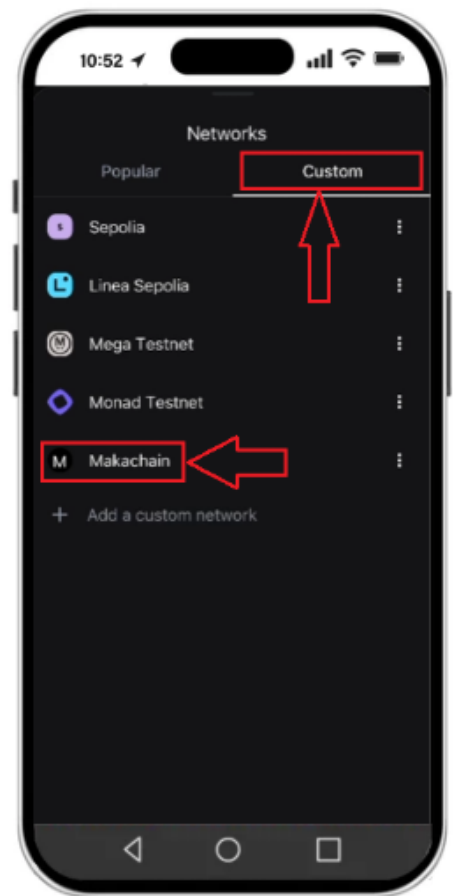

8

To locate the wallet in MetaMask, click the Home button, then click the Network button

9

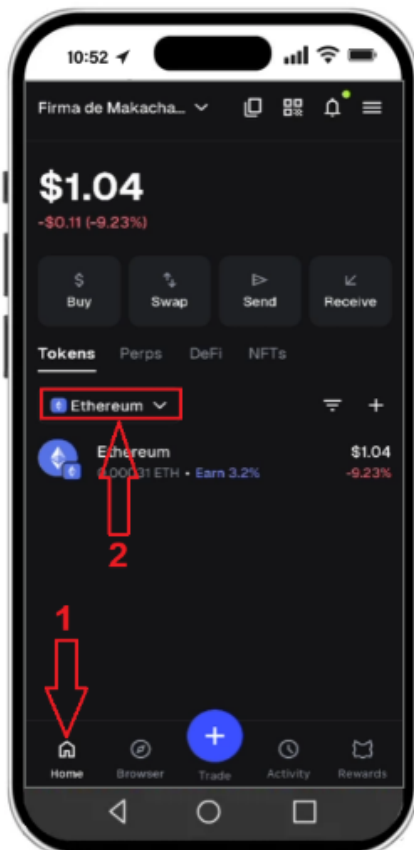

A list of networks will appear; click Custom to find the Makachain network.

Connect your MetaMask wallet to Makachain From your Browser or manually

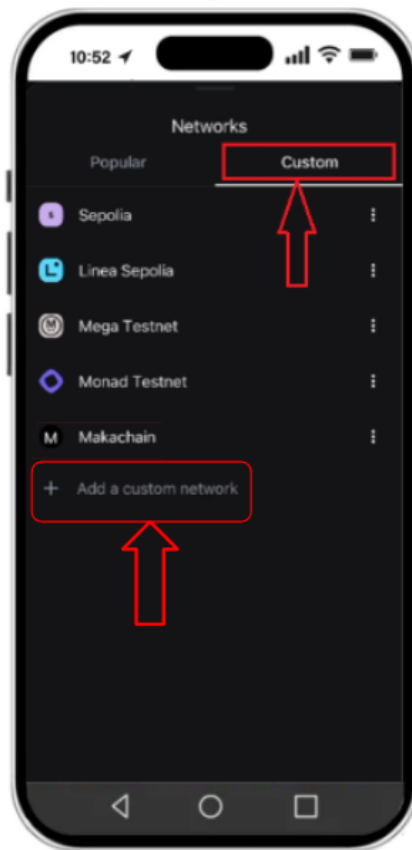

1

In your MetaMask account in the Home screen, click the Networks button.

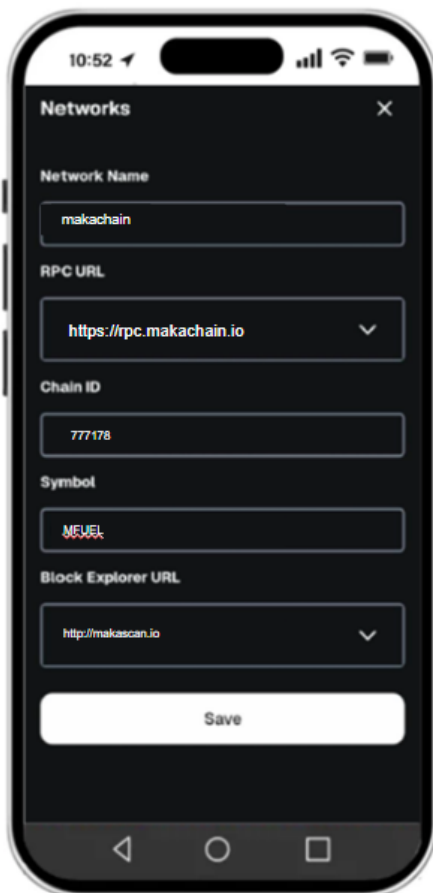

2

Then, click the Custom button, and select Add a custom network.

3

You will be taken to the section shown below, where you need to fill in each field with the following information.

Network name: makachain

Public RPC: <https://rpc.makachain.io>

Chain ID: 777178

Token: MFUEL

Explorer: <https://makascan.io>

After completing this, click Save, and the network will be added

How Do Transaction Fees Work in Makachain?

In Makachain, the native token is called MFUEL. This token is used to pay for transaction fees (also known as gas fees), just like in other blockchains.

But here's the big difference: **MFUEL has zero value.**

This means that even though the system technically charges you gas in MFUEL, you're not actually paying anything, because its value is 0. In other words, you can send transactions without worrying about having a gas balance.

Also, you don't need to buy MFUEL. The network automatically refills it for you whenever you need it, so you'll always have enough to operate.

So, how does the network make money if gas is free?

The answer is simple: every time you make a transaction, the network charges a small

fixed fee of 10 cents (USD 0.10) in the same currency you're sending.

For example:

- If you send **50 USDT**, you'll pay **\$0.10 worth in USDT** as a fee.
