HOW TO CREATE PLATFORM WALLETS TO YOUR CASINO OR EGAMING

This is a manual demonstration of how to create platform wallets for your users.

Once configured, you can automate this using the API key created in MakaPay for your casino or eGaming platform. You can find the documentation and Webhook at:

<https://docs.makapay.io/guides/vault>

STEP 8

With MakaPay, you can select the "Auto-Conversion" option so that when your customers pay, their payment is automatically converted into a stablecoin. To use this option, select the icon shown in the image

 **Auto-Conversion**

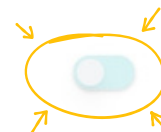

Automatically convert volatile deposits (ETH, BNB, POL) into your chosen stablecoin before they are forwarded to your wallet

Enable Auto-Conversion
Convert supported deposits into USDT on arrival

Target stablecoin
☒ USDT ☐ USDC

You can change this election anytime — it applies at conversion execution time. On chains without your chosen stablecoin (e.g. USDT on Base) the deposit converts to the available one.

Conversion routes include a 0.06% (6 bps) MakaPay affiliate fee in the swap. After a successful conversion, the single 1% Vault fee is calculated from the realized converted output. If no conversion runs, the single 1% fee is taken from the token being swept.
