

HOW TO:

Connect Makachain Network to

STEP BY STEP GUIDE

MAKA CHAIN

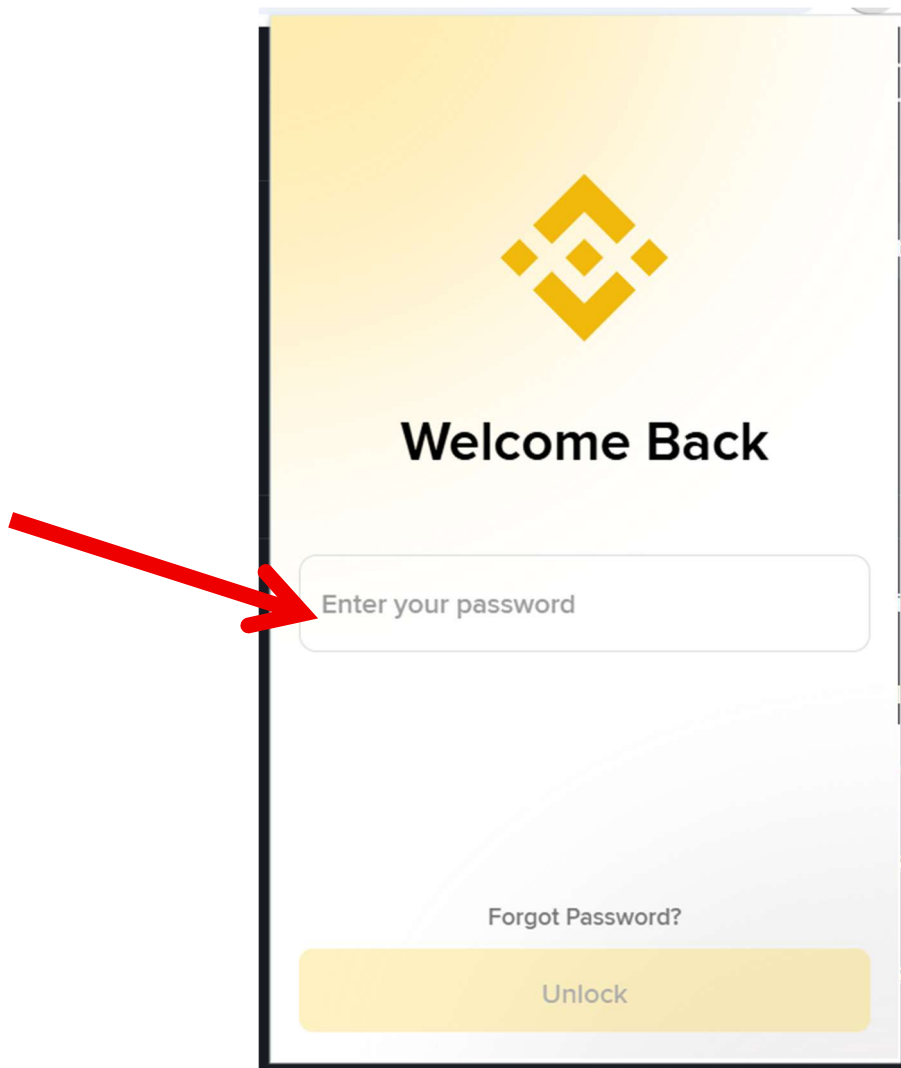

This guide provides step-by-step instructions on how to connect the Makachain network to your Binance wallet. Once connected, you'll be able to access and interact with the Makachain network directly from your wallet.

Before starting you will need
[Binance wallet](#)

Connect Makachain to your Binance wallet

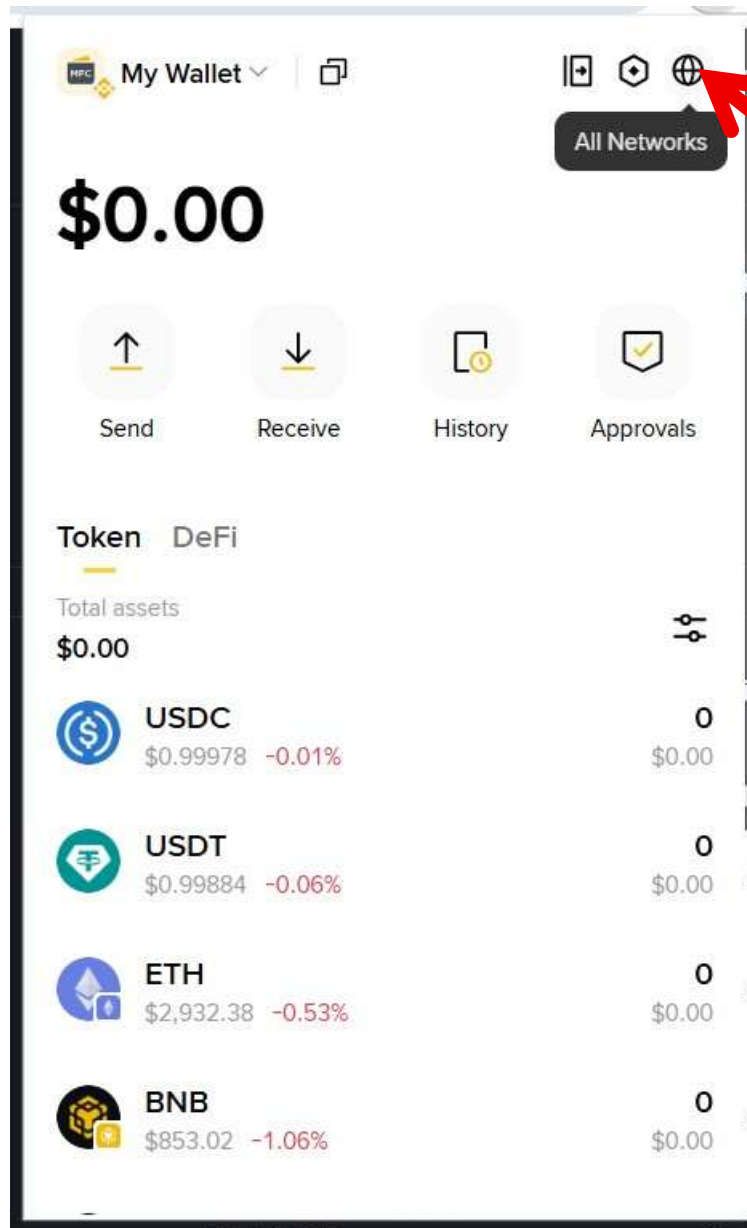

1

It is important to note that, at the moment, adding the Makachain network to Binance must be done manually. First download the Binance Chrome extension [here](#). Then log in to your Binance Wallet using your credentials and proceed with the manual network configuration.

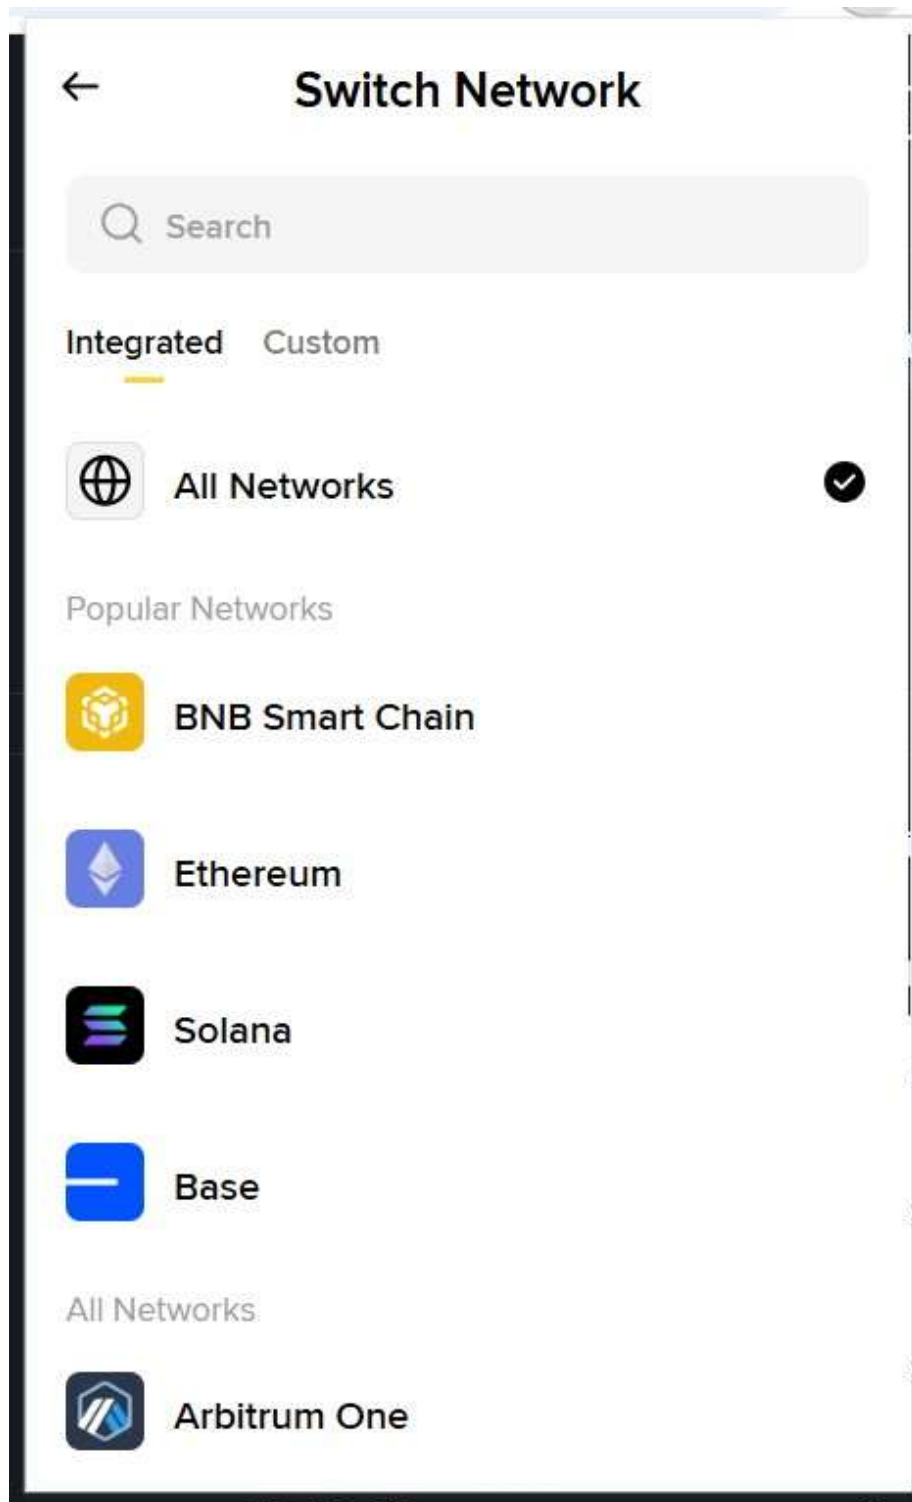

2

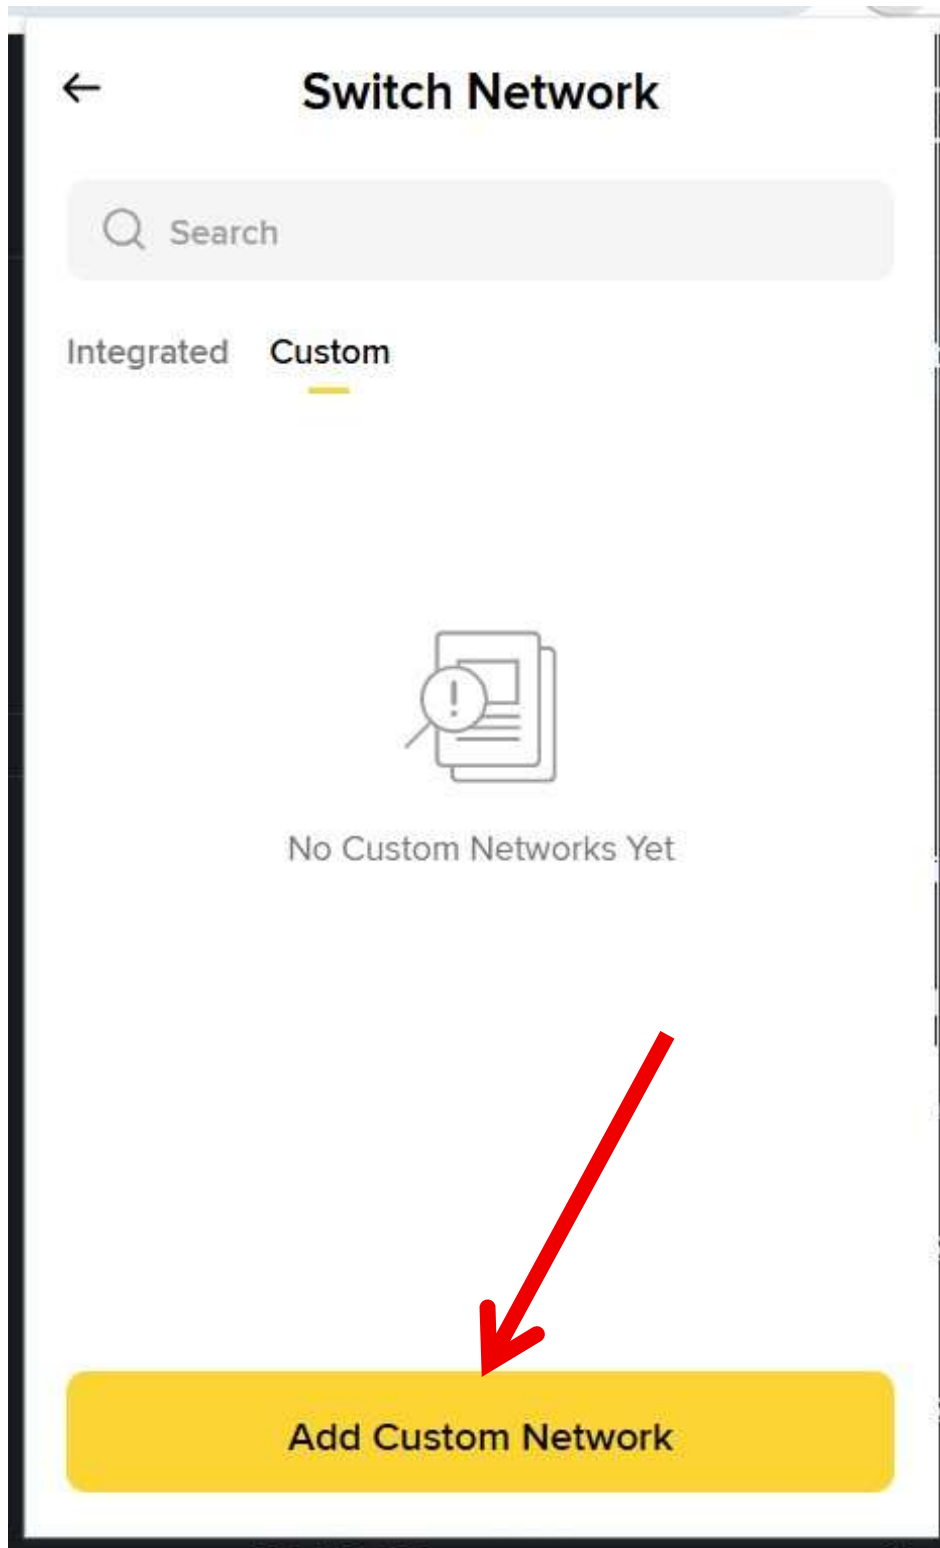

After logging in Click on the “All Networks” button

3

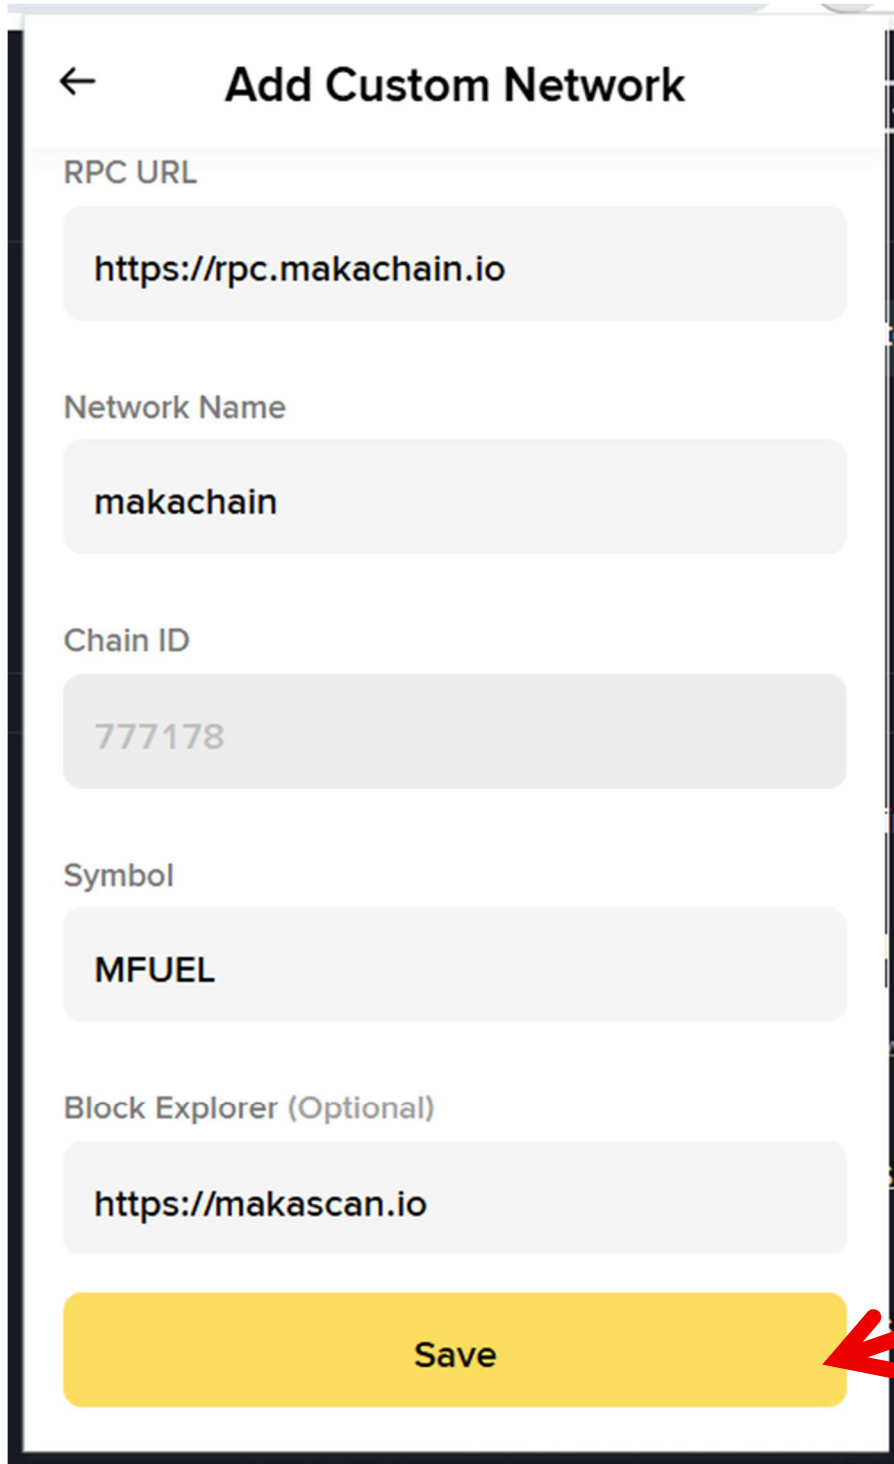

Then click on the “Custom” Network button

4**Then click on the “Add Custom Network” button**

5

Then you need to fill out all the form fields with the following information. Once completed, click on Save.

← Add Custom Network

RPC URL

<https://rpc.makachain.io>

Network Name

makachain

Chain ID

777178

Symbol

MFUEL

Block Explorer (Optional)

<https://makascan.io>

Save

RPC URL: <https://rpc.makachain.io>

Network name: makachain

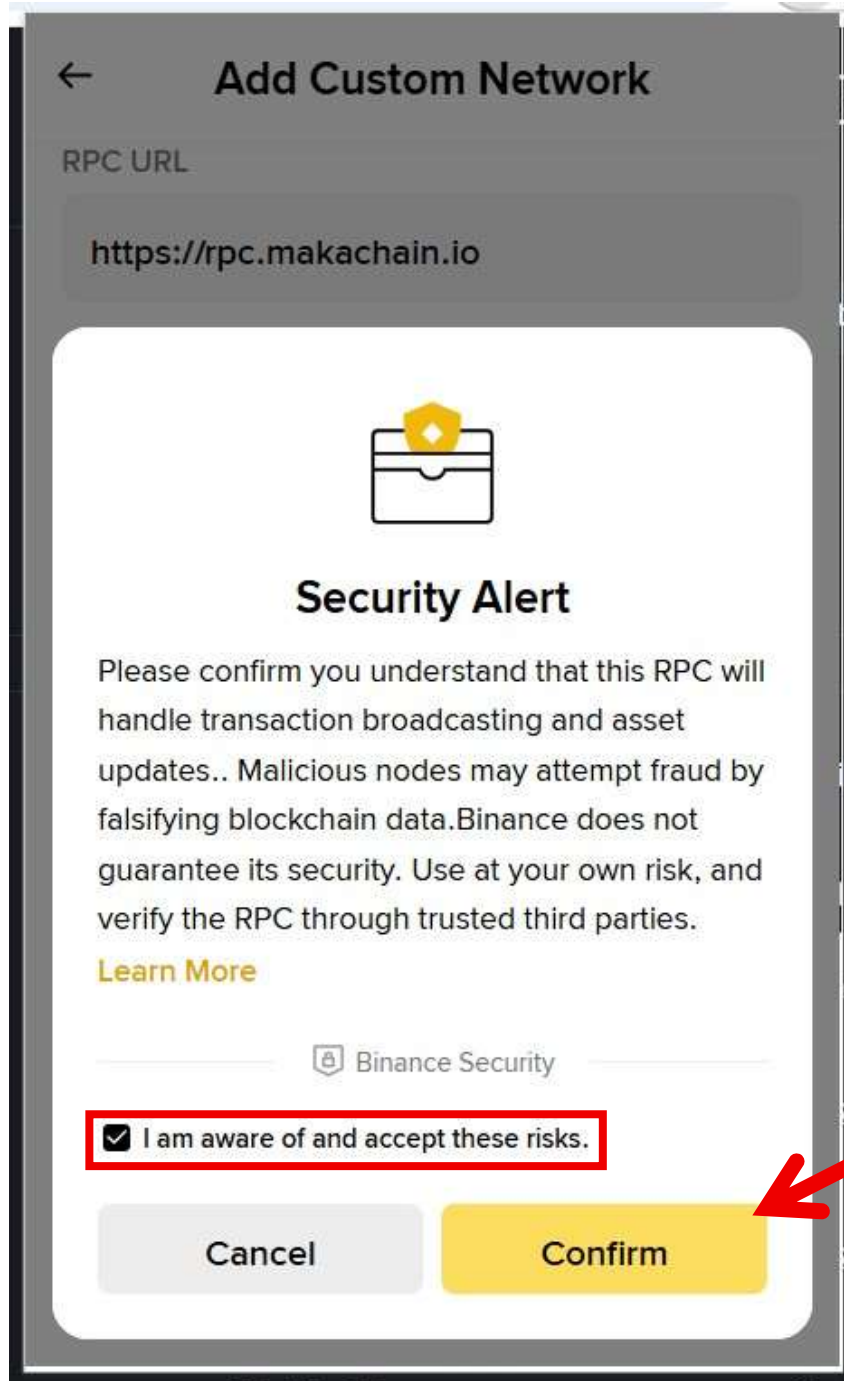

Chain ID: 777178

Symbol: MFUEL

**Blockchain Explorer:
<https://makascan.io>**

6

After clicking Save, you will need to check that you are aware of the security alert, and then confirm

← Add Custom Network

RPC URL

https://rpc.makachain.io

Security Alert

Please confirm you understand that this RPC will handle transaction broadcasting and asset updates.. Malicious nodes may attempt fraud by falsifying blockchain data. Binance does not guarantee its security. Use at your own risk, and verify the RPC through trusted third parties.

☒ I am aware of and accept these risks.

Cancel Confirm

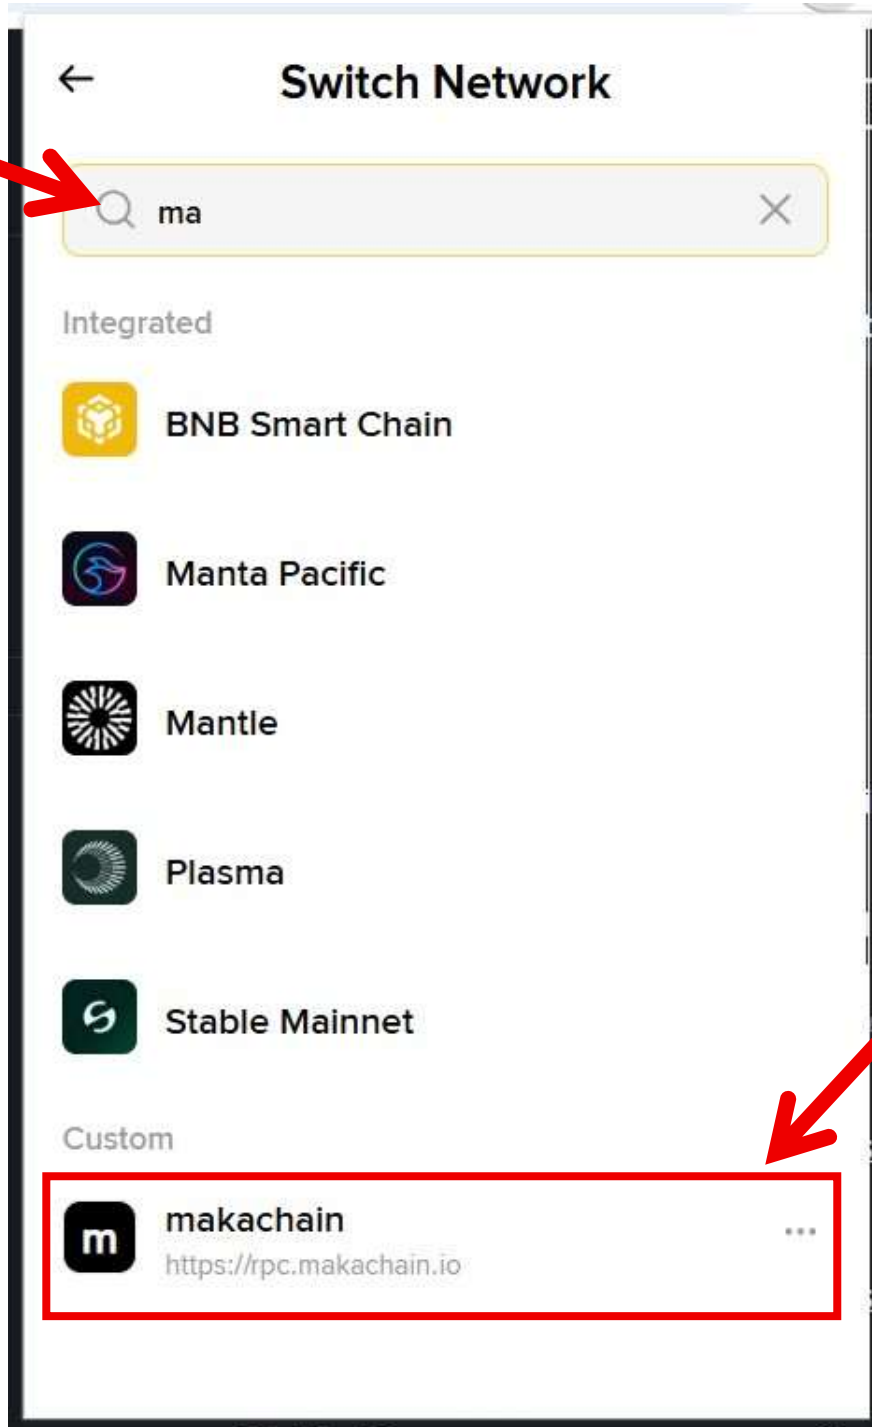

7

And now you can see that the Makachain network is connected to your Binance wallet

8

You can also click on the All Networks button, and then you can look for the Makachain network on the search bar

How Do Transaction Fees Work in Makachain?

In Makachain, the native token is called MFUEL. This token is used to pay transaction fees (also known as gas fees), just like in other blockchains.

But here's the big difference: **MFUEL has zero value.**

This means that even though the system technically charges you gas in MFUEL, you're not actually paying anything, because its value is 0. In other words, you can send transactions without worrying about having a gas balance.

Also, you don't need to buy MFUEL. The network automatically refills it for you whenever you need it, so you'll always have enough to operate.

So, how does the network make money if gas is free?

The answer is simple: every time you make a transaction, the network charges a small

fixed fee of 10 cents (USD 0.10) in the same currency you're sending.

For example:

- If you send **50 USDT**, you'll pay **\$0.10 worth in USDT** as a fee.
