

HOW TO:

Connect Makachain Network to

STEP BY STEP GUIDE

MAKA CHAIN

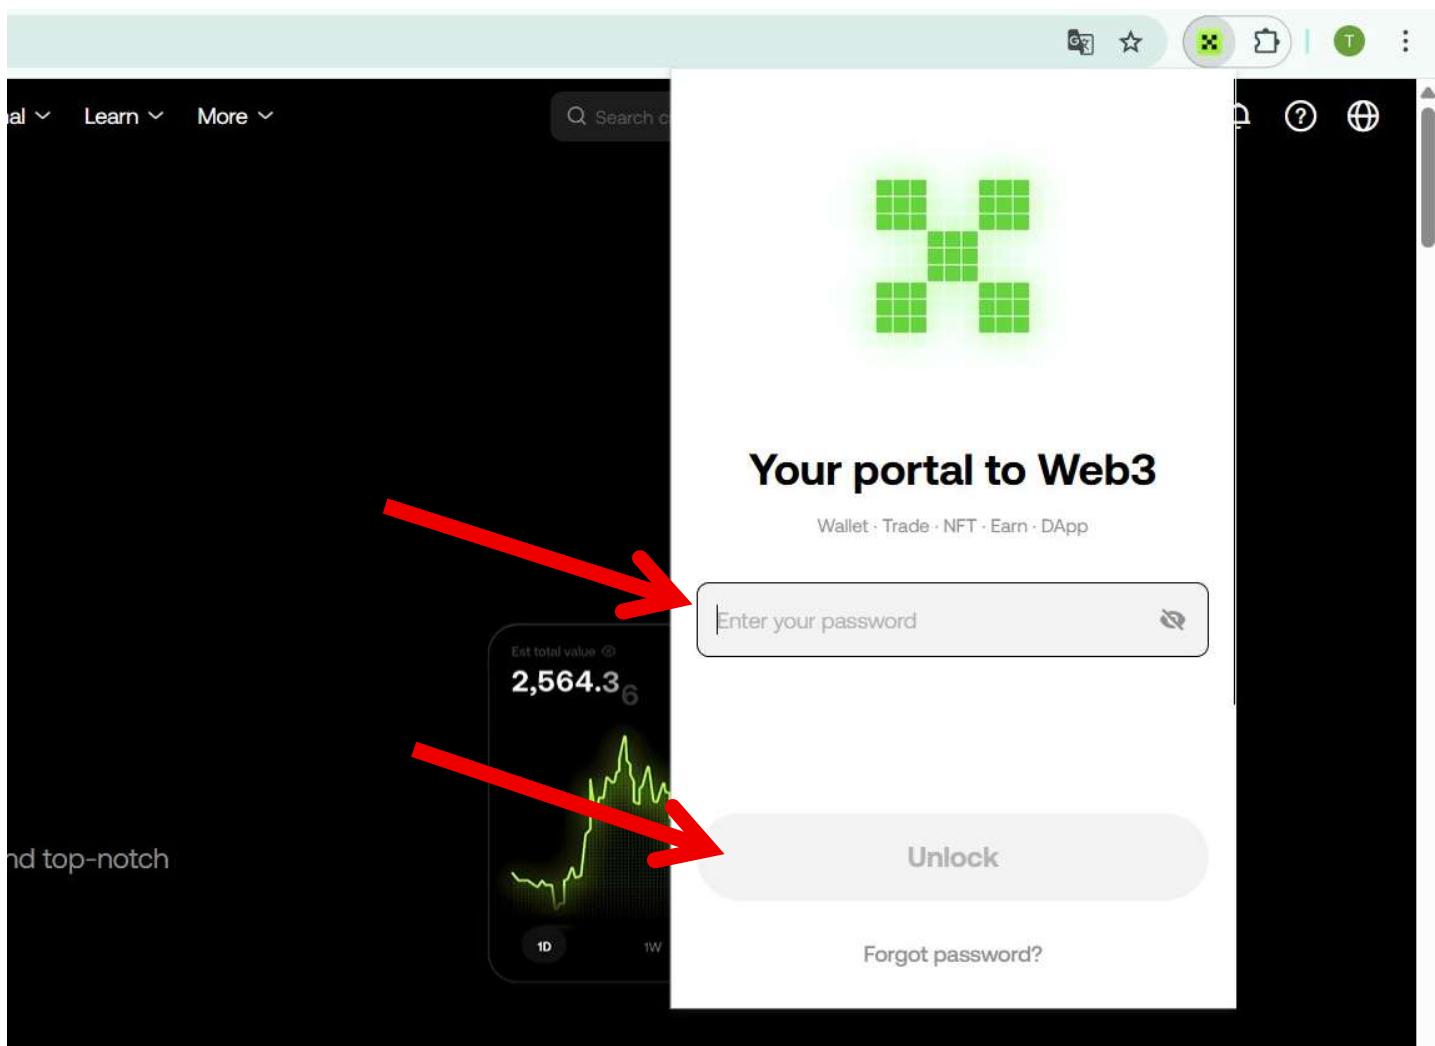

This guide provides step-by-step instructions on how to connect the Makachain network to your OKX wallet. Once connected, you'll be able to access and interact with the Makachain network directly from your wallet.

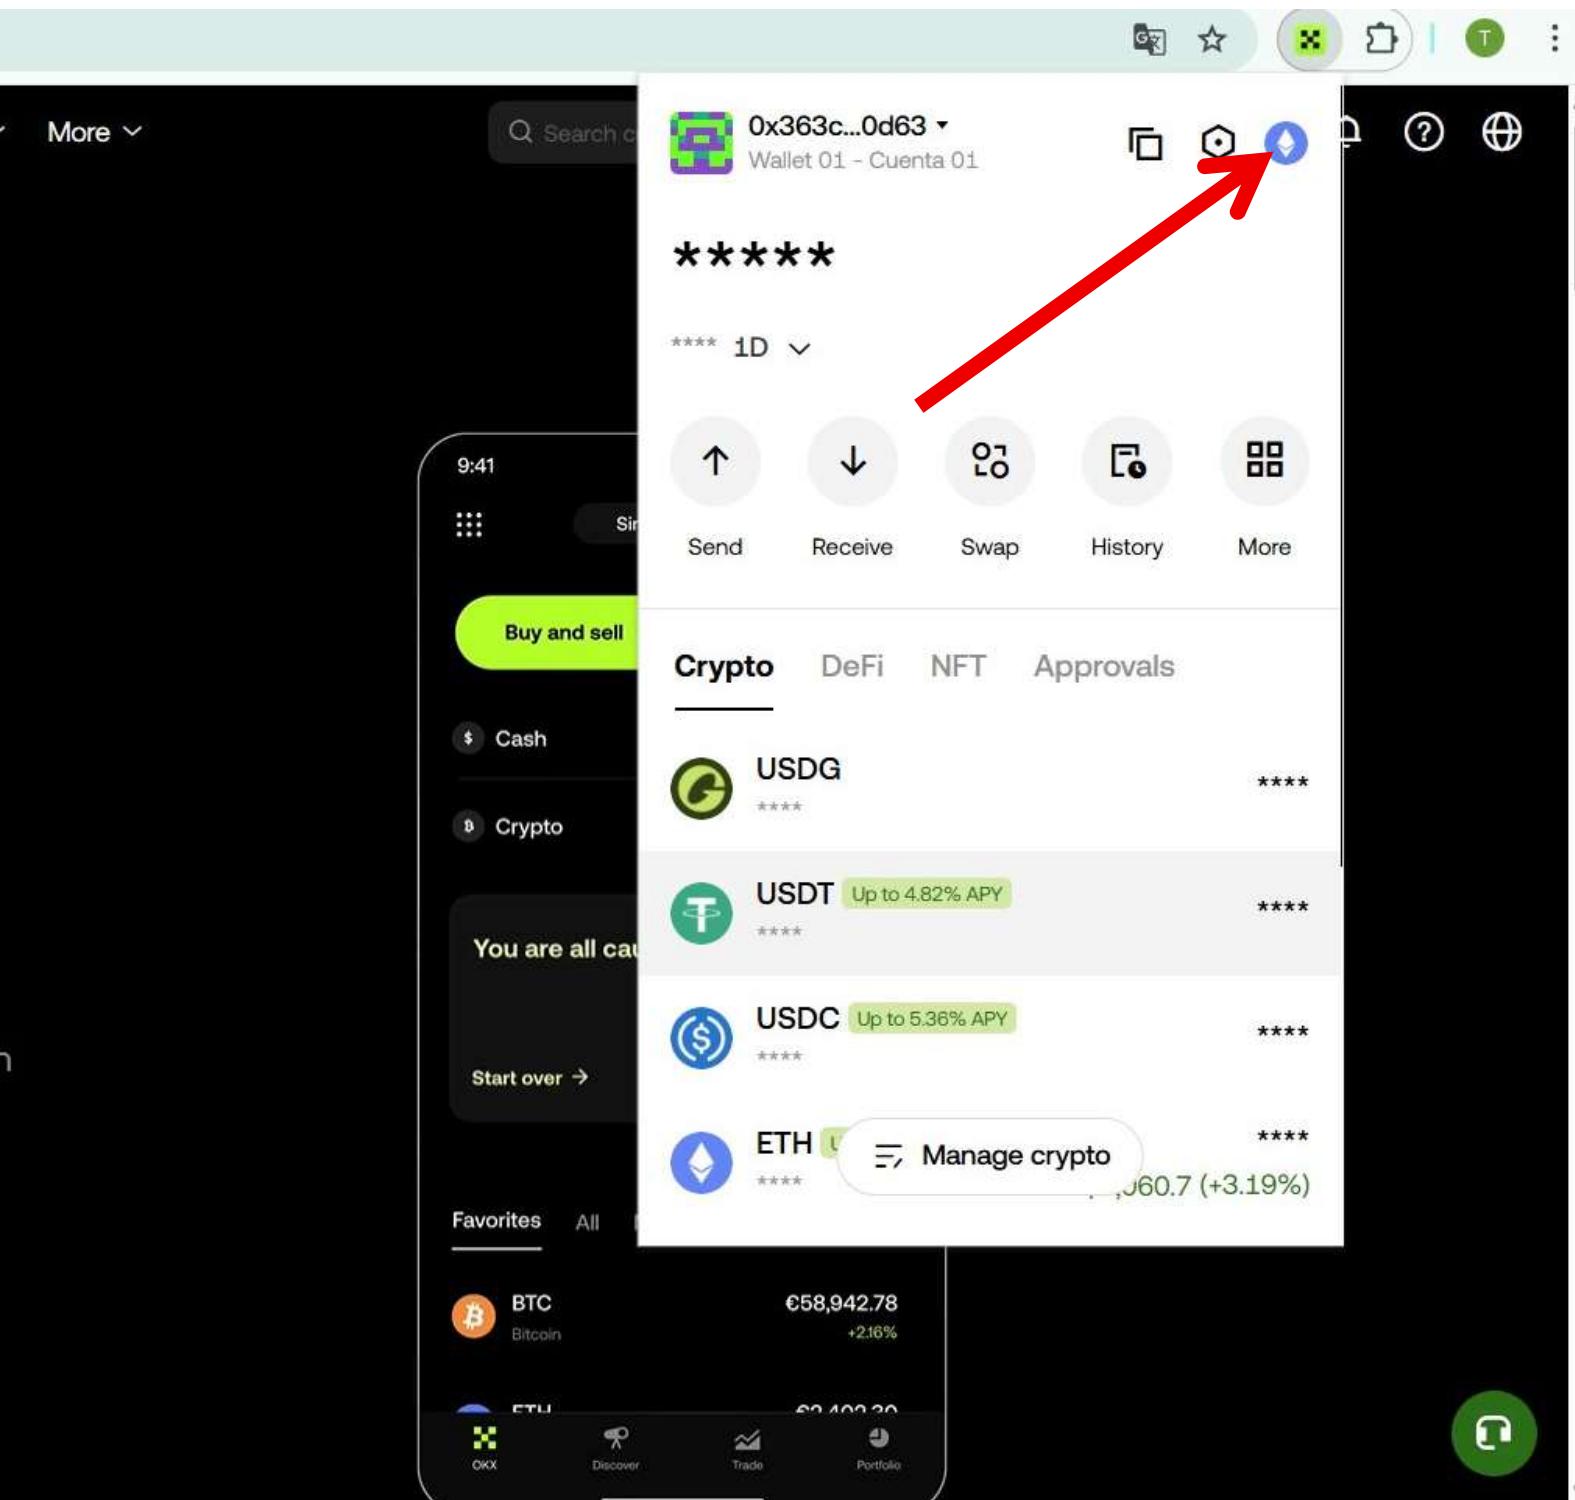

Before starting you will need
<https://www.okx.com/>

Connect Makachain to your OKX wallet

1

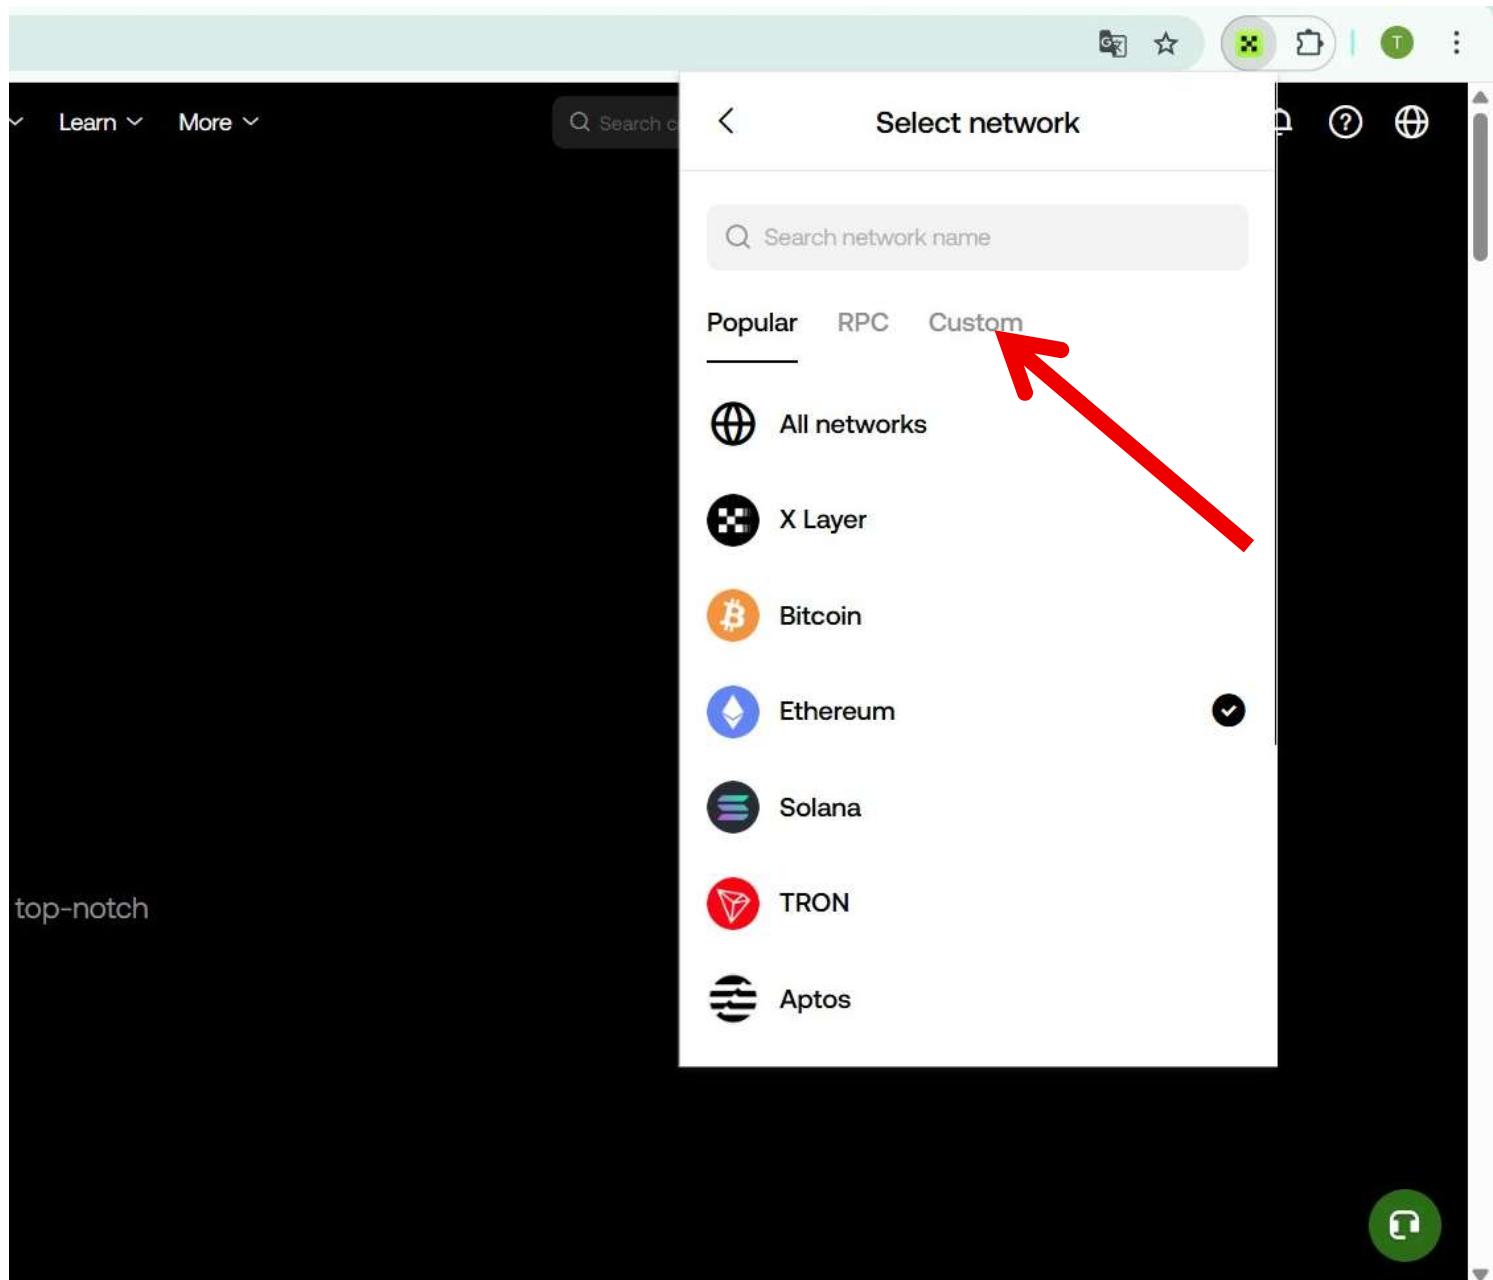

It is important to note that, at the moment, adding the Makachain network to OKX must be done manually. First download the OKX Chrome extension. Then log in to your OKX Wallet using your credentials and proceed with the manual network configuration.

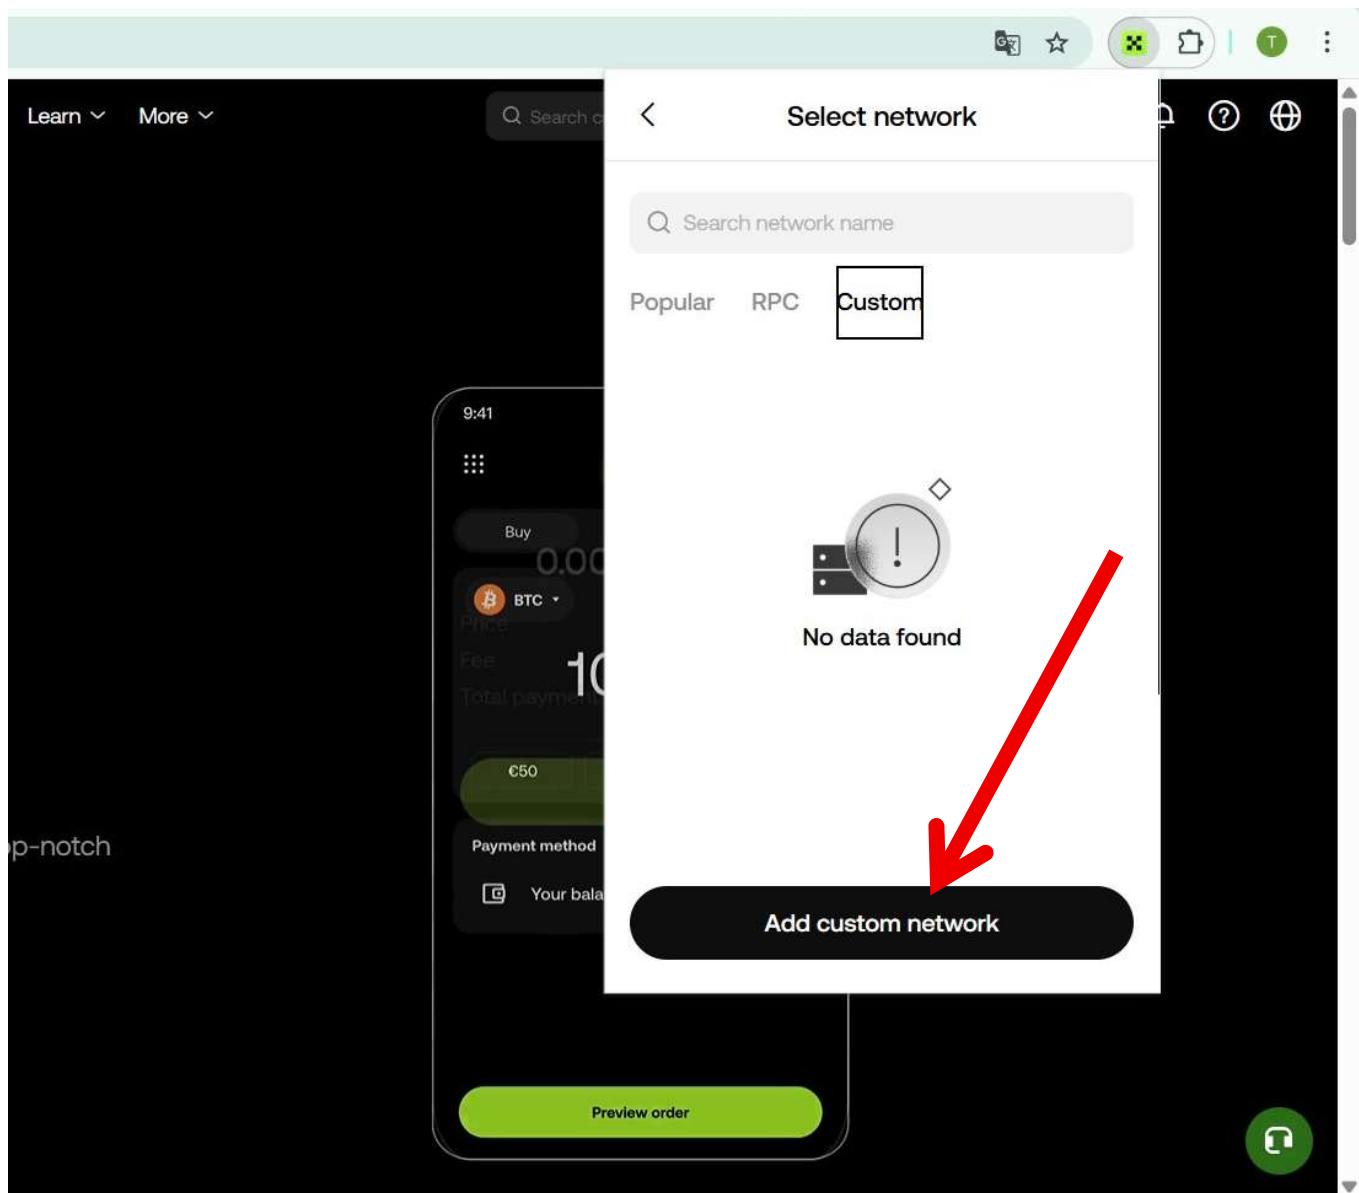

2**After logging in Click on the networks button**

Then click on the “Custom” Network button

4

Then click on the “Add Custom Network” button

 5

You will be redirected to a page where you need to fill out all the form fields with the following information. Once completed, click on Save.

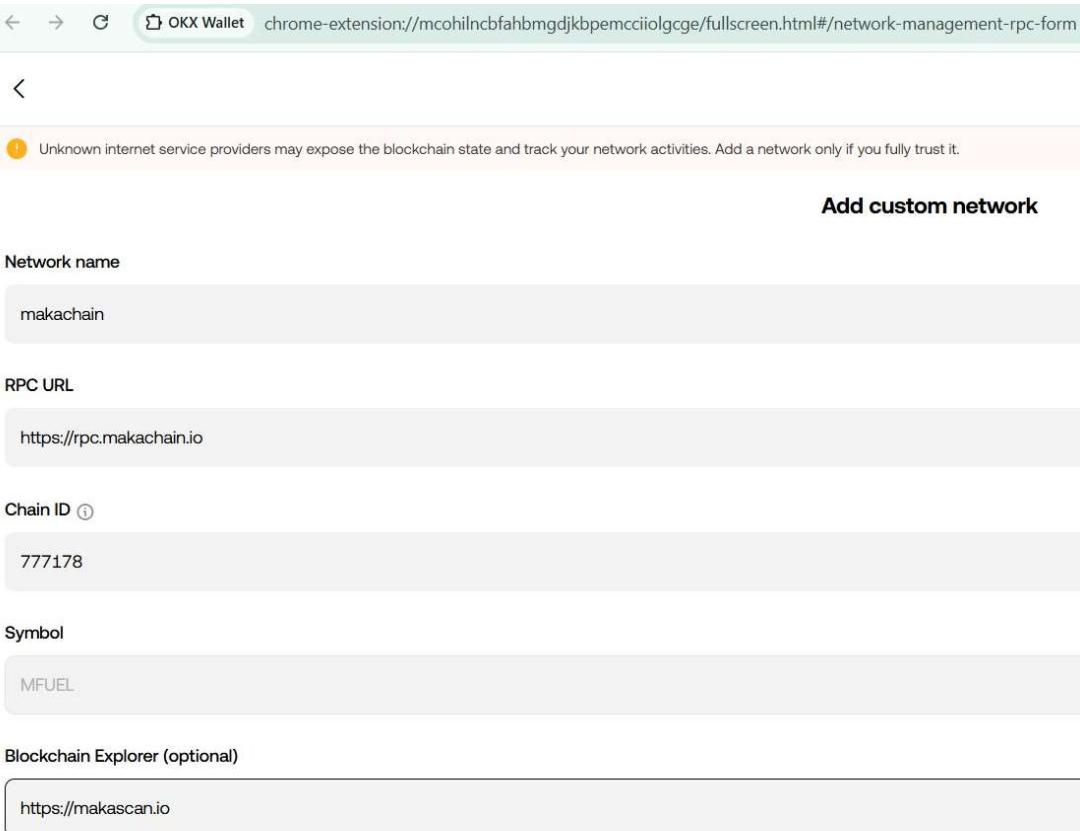

Network name: makachain

RPC URL: <https://rpc.makachain.io>

Chain ID: 777178

Symbol: MFUEL

Blockchain Explorer: <https://makascan.io>

OKX Wallet chrome-extension://mcohilncbfahbmgdjkbpemcciiolgcge/fullscreen.html#/network-management-rpc-form

Network name: makachain

RPC URL: <https://rpc.makachain.io>

Chain ID: 777178

Symbol: MFUEL

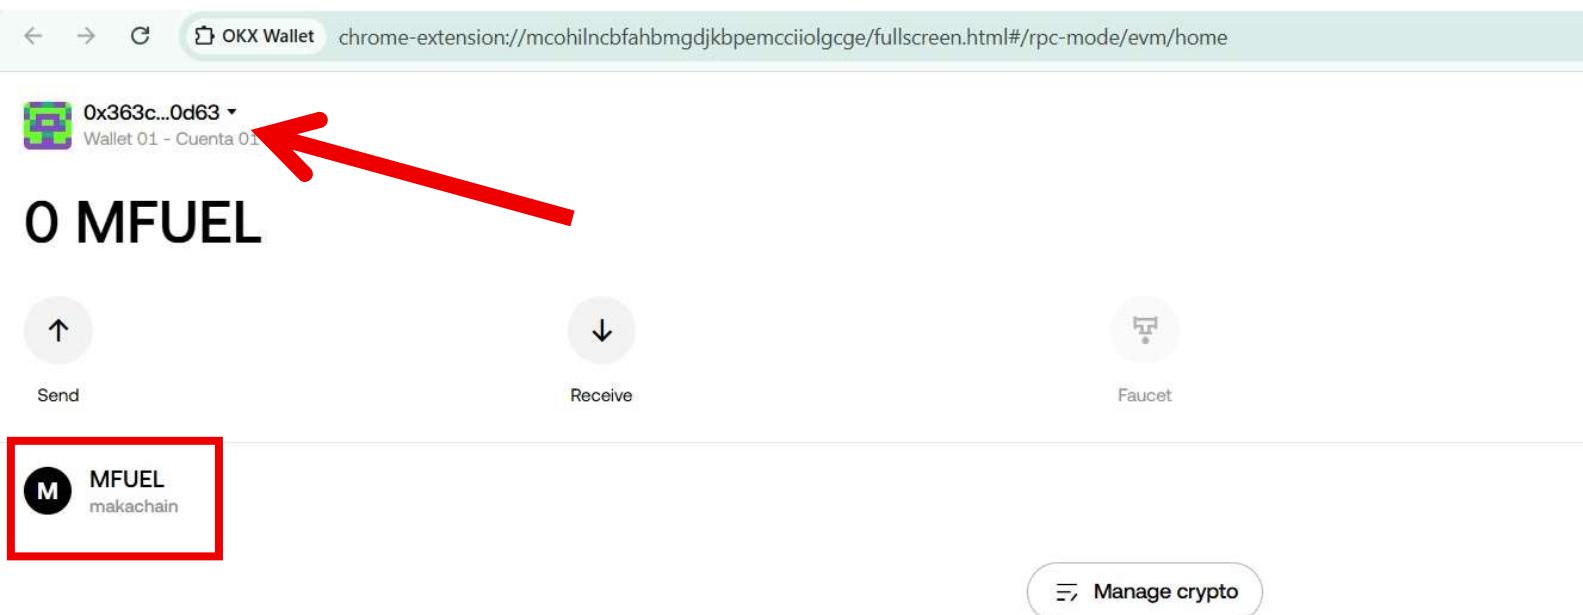

Blockchain Explorer (optional): <https://makascan.io>

 Save

makachain.io

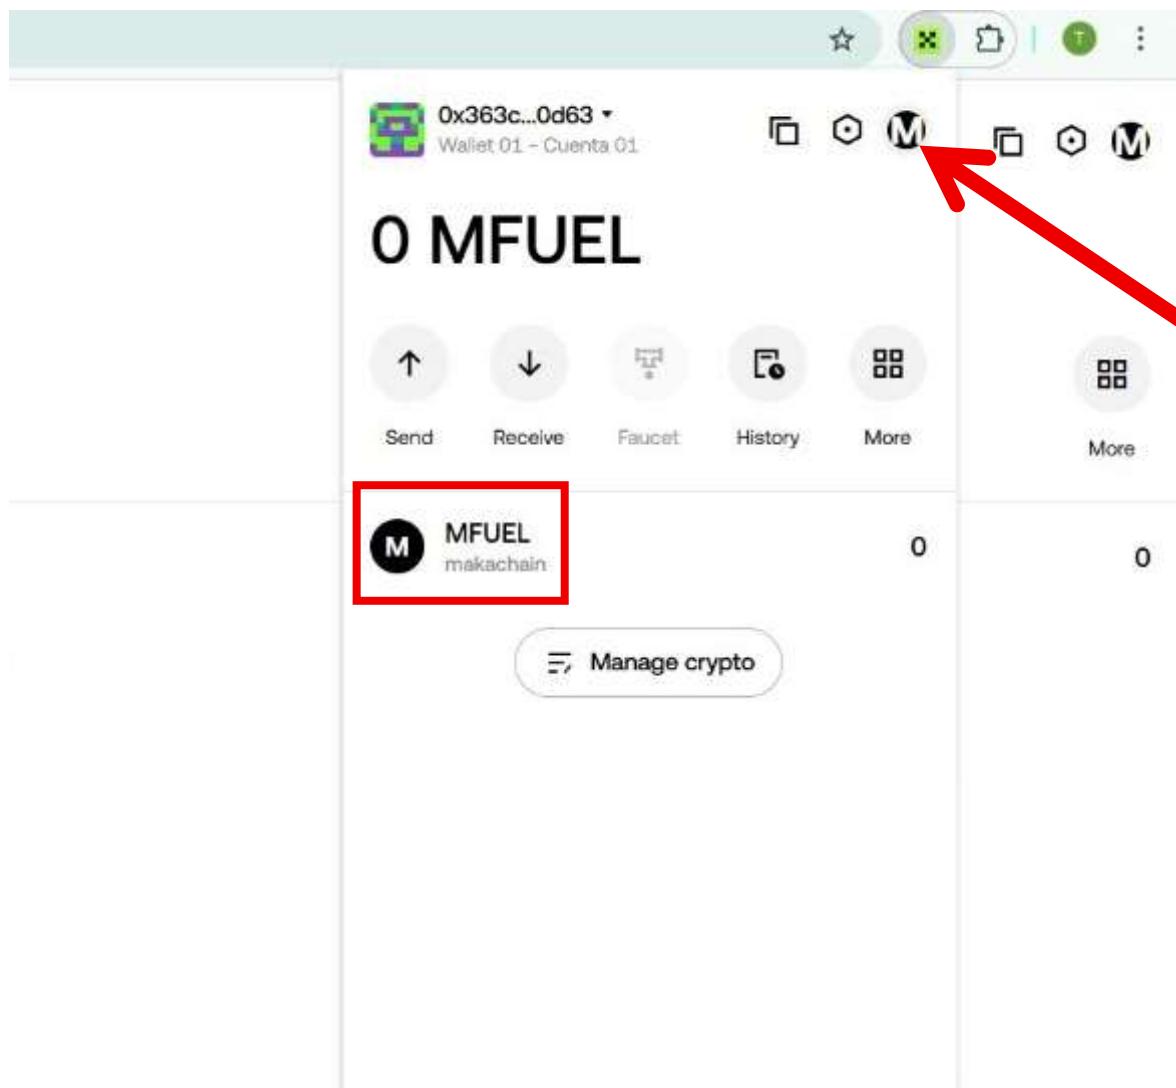

After clicking Save, you will see that the Makachain network is now connected to OKX.

The screenshot shows the OKX Wallet interface. At the top, it displays the URL "chrome-extension://mcohilncbfahbmgdjkbpemcciiolgce/fullscreen.html#/rpc-mode/evm/home". The wallet address "0x363c...0d63" is listed with a dropdown arrow, and "Wallet 01 - Cuenta 01" is selected. Below the address, the balance is shown as "0 MFUEL". There are three buttons: "Send" (up arrow), "Receive" (down arrow), and "Faucet". A red box highlights the "MFUEL makachain" button, which is also highlighted with a red border. At the bottom right, there is a "Manage crypto" button.

7

You can also verify directly in your OKX Wallet that the Makachain Network is connected. This completes the process of adding the Makachain network to OKX.

How Do Transaction Fees Work in Makachain?

In Makachain, the native token is called MFUEL. This token is used to pay transaction fees (also known as gas fees), just like in other blockchains.

But here's the big difference: **MFUEL has zero value.**

This means that even though the system technically charges you gas in MFUEL, you're not actually paying anything, because its value is 0. In other words, you can send transactions without worrying about having a gas balance.

Also, you don't need to buy MFUEL. The network automatically refills it for you whenever you need it, so you'll always have enough to operate.

So, how does the network make money if gas is free?

The answer is simple: every time you make a transaction, the network charges a small

fixed fee of 10 cents (USD 0.10) in the same currency you're sending.

For example:

- If you send **50 USDT**, you'll pay **\$0.10** worth in USDT as a fee.
